

## DECLARATION

### PCB in oil immersed distribution transformers manufactured since May 1, 1988

As **PAUWELS TRAF0 BELGIUM N.V.** is only using PCB-free oil (< 1ppm) since 1988/05/01, we can confirm that the delivered transformers, starting from the above mentioned date, are PCB-free at the time of delivery (analysis according to ASTM D 4059)

This is guaranteed by a systematically oil sampling on finished transformers.

Transformers manufactured before this date were not systematically controlled. And as we do not know the oil conditions of the transformer after delivery, it is advisable to take an oil sample/transformer for gas chromatography analysis. This method will assure you the exact PCB-level.
